Contact Worker Information  
Contact Person :

HOME | HELP & TRAINING | PRIVACY & SECURITY | AGENCY ADDRESS BOOK version 1.0

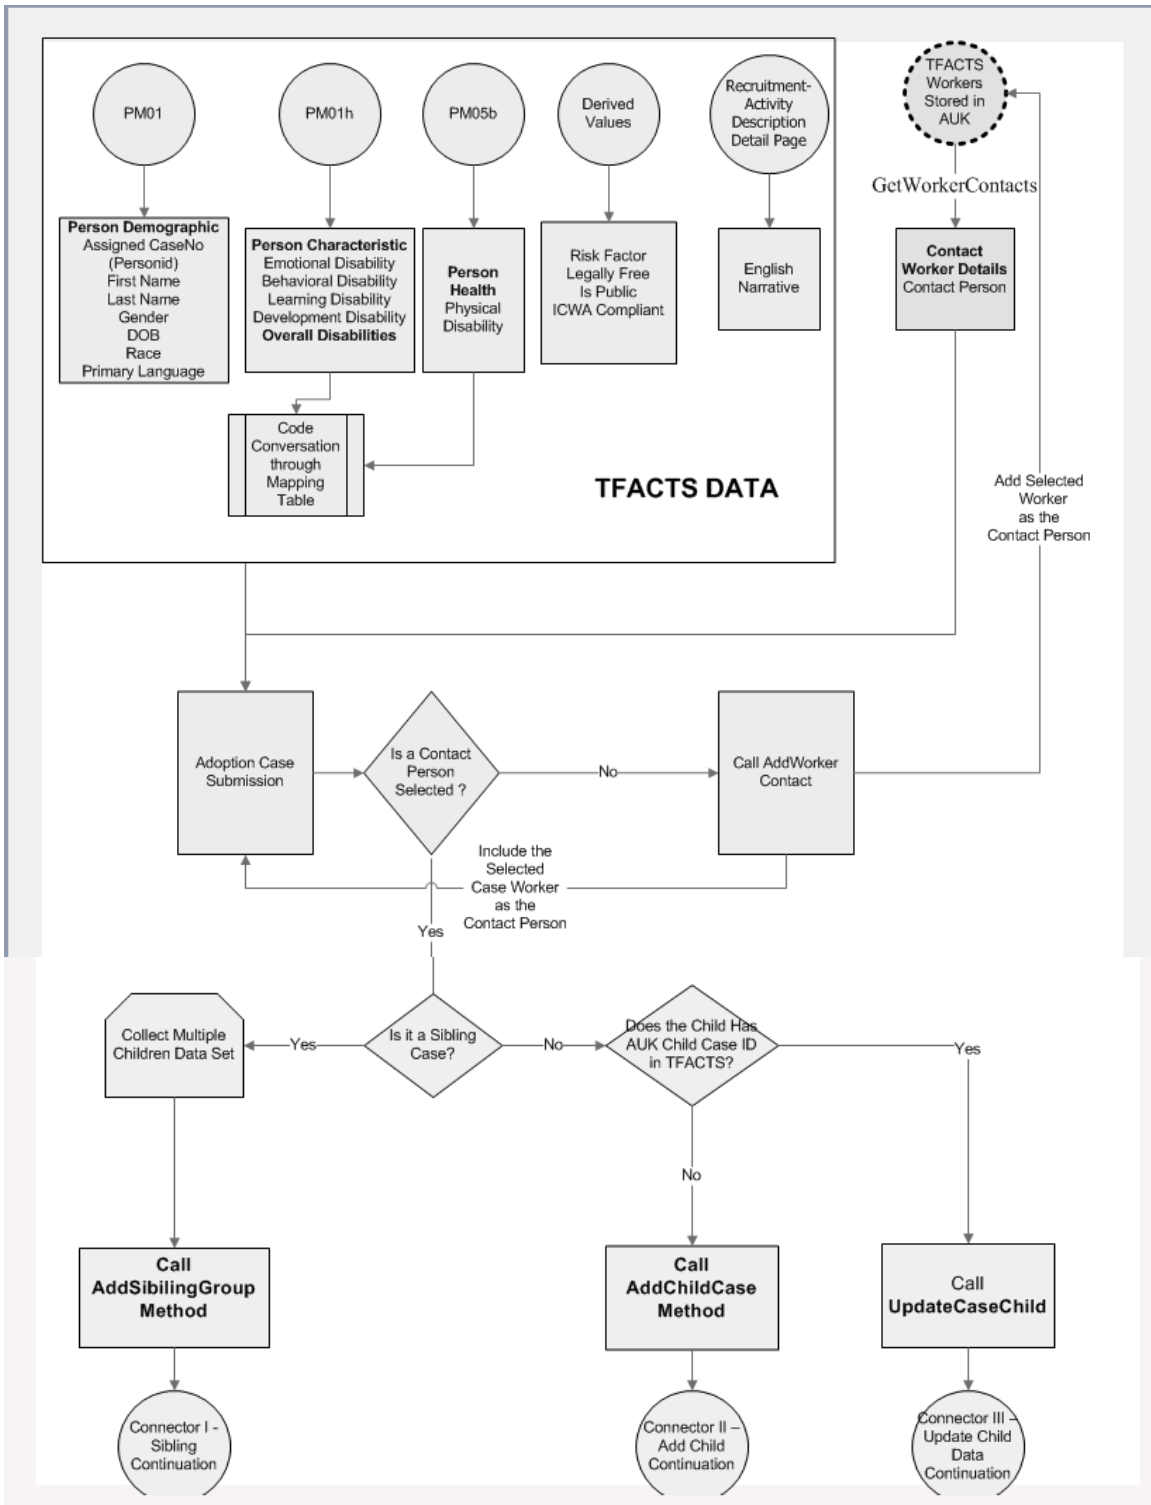

TFACTS user can perform the following actions from this screen

- Create AUK case for a child
- Create a Sibling group case
- Update existing AUK child case
- Retrieve the list of Worker Contacts representing Tennessee Registered Workers in AUK for Contact Persons.
- Register a new TFACTS worker assigned worker as the contact person in AUK

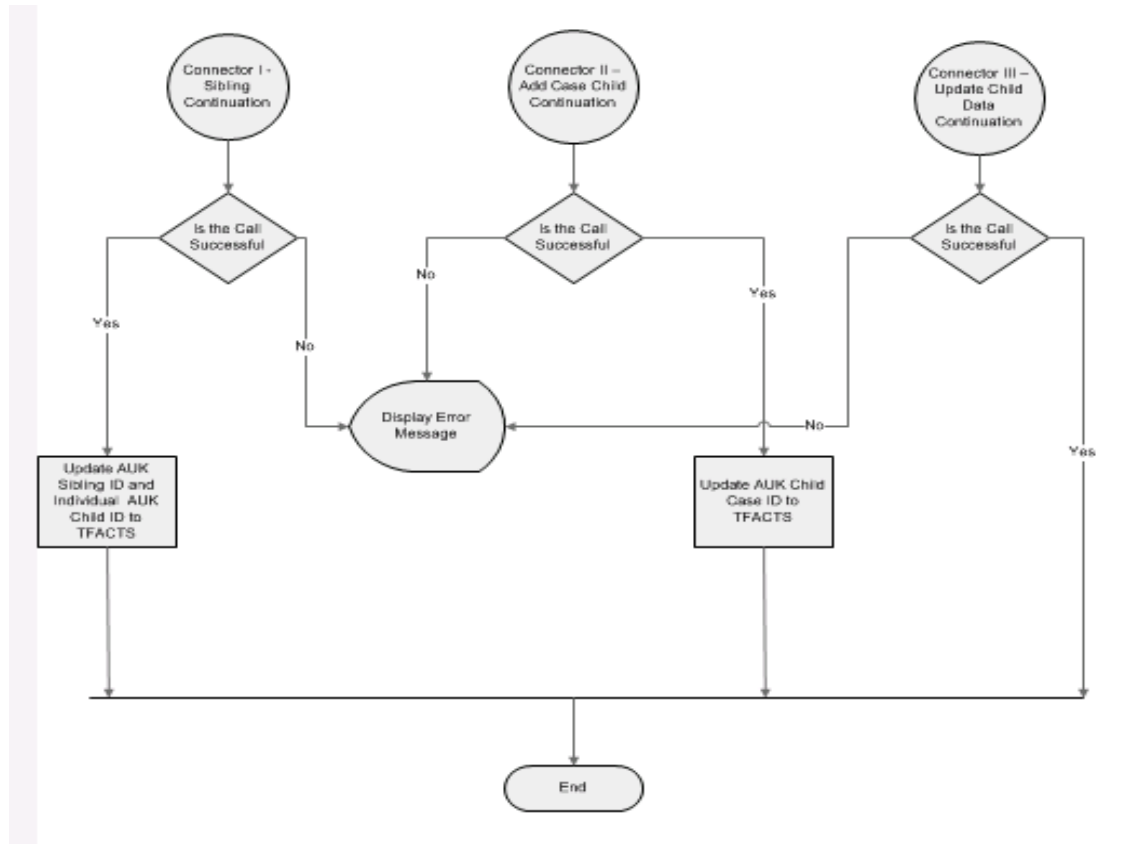

If the user selects more than one child record, the System will generate a Sibling Group Case ID along with a Child Case ID. The System will only allow selection of more than one child when none of the children have an existing AUK Child Case ID.

## APPENDIX

Following AUK Web service methods are available to submit TFACTS data

AddChildCase - This method will be used when TFACTS needs to add a new child case in AUK

UpdateChildCase - This method will be used to update an existing AUK child case

AddSiblingGroup - This method will be used when TFACTS adds a new sibling group in AUK with 2 or more children

AddWorkerContact - This method will be used when TFACTS adds a new TFACTS worker as the contact person in AUK system.

GetWorkerContacts - This method will be used to retrieve TFACTS contact persons from AUK.

There are several other methods available to obtain reference values from AUK.

### Data Description

- TFACTS submits Child's Case (single and sibling group) information to Adopt-US-Kids using the web service.
- The Adopt-US-Kids returns updated Case Number (the ID that is used in Adopt-US-Kids to represent the submitted Case) to TFACTS.
- Values for elements Race, Languages, Disability Levels, Risk Factors, Physical disabilities, Emotional disabilities, Developmental disabilities, Learning disabilities, Behavioral disabilities, ICWA compliant values will be obtained manually using the respective web service get methods and stored in a reference table.
- When there are changes/updates in the AUK mapping values, AUK will notify the changes/updates to DCS representative via email. These changes will be manually updated to TFACTS reference tables and scripts.

### Web Service Security

The web service will be secured by requiring a user name and password. This information will be passed in a SOAP header and validated in all web service methods. This login information will not be tied to an AdoptUsKids.org site user, but will be a new account specific for the web service.
